› Dedicated

plication's dependencies for known vulnerabilities. All dependencies are scanned, including nested dependencies.

d part of Software Composition Analysis (SCA). SCA can contain aspects of inspecting the ally include application and system dependencies that are almost always imported from m items you wrote yourself.

velopment phase of your application's life cycle. Every time a pipeline runs, vulnerabilities are urce and target branches. Vulnerabilities and their severity are listed in the merge request, isk to your application, before the code change is committed. Vulnerabilities can also be us Vulnerability Scanning.

and Container Scanning to ensure coverage for all of these dependency types. To cover as ncourage you to use all of our security scanners. For a comparison of these features, see tainer Scanning.

upport runtime installation of compilers and interpreters.

Scanning

-to demo of this Dependency Scanning documentation, see How to use dependency scanning Security part 3

ow-to demos, see Get Started With GitLab Application Security Playlist

ackage managers

y managers are supported when using the Dependency Scanning CI Template:

ersions	Package manager	Supported files	Processes multiple files?
	NuGet	`packages.lock.json`	Y
	Conan	`conan.lock`	Y
	Go	`go.mod`	Y
S 17 LTS or 21	Gradle[2]		N
