About us

Updated On : 20 Apr 2

The **Central Pollution Control Board (CPCB)**, statutory organisation, was constituted in September, 1974 und Water (Prevention and Control of Pollution) Act, 1974. Further, CPCB was entrusted with the powers and f ti the Air (Prevention and Control of Pollution) Act, 1981.

It serves as a field formation and also provides technical services to the Ministry of Environment and Fore of provisions of the Environment (Protection) Act, 1986. Principal Functions of the CPCB, as spelt out in the er (Prevention and Control of Pollution) Act, 1974, and the Air (Prevention and Control of Pollution) Act, 198 to cleanliness of streams and wells in different areas of the States by prevention, control and abatement of water and (ii) to improve the quality of air and to prevent, control or abate air pollution in the country.

Air Quality Monitoring is an important part of the air quality management. The National Air Monitorin o (NAMP) has been established with objectives to determine the present air quality status and trends and t nt regulate pollution from industries and other source to meet the air quality standards. It also provides ba ou quality data needed for industrial siting and towns planning.

Besides this, CPCB has an automatic monitoring station at ITO Intersection in New Delhi. At this station Respira Suspended Particulate Matter (RSPM), Carbon Monoxide (CO), Ozone (O3), Sulphur Dioxide (SO2), Nitrogen Dio and Suspended Particulate Matter (SPM) are being monitored regularly. This information on Air Quality at ITO i every week.

Water Quality Monitoring is an important part of the Water quality management. Fresh water is a finite resou essential for use in agriculture, industry, propagation of wildlife & fisheries and for human existence. India is a country. It has 14 major rivers, 44 medium rivers and 55 minor rivers besides numerous lakes, ponds and wells used as primary source of drinking water even without treatment. Most of the rivers being fed by monsoon rai limited to only three months of the year, run dry throughout the rest of the year often carrying wastewater dis from industries or cities/towns endangering the quality of our scarce water resources. The parliament of India i wisdom enacted the Water (Prevention and Control of Pollution) Act, 1974 with a view to maintaining and resto wholesomeness of our water bodies. One of the mandates of CPCB is to collect, collate and disseminate techni statistical data relating to water pollution. Hence, Water Quality Monitoring (WQM) and Surveillance are of u importance.
